1. **Description**

I created a Technology website for my school utilizing Weebly, a free website builder. This website will be a place for the staff to learn and share new and exciting technology tools. I have currently set up the website with six web 2.0 technology tools - Symbaloo, QR codes, Plickers, LiveBinders, Reading Eggs, and Storybird. Each tool has its own page on the site and I currently have a link to the tool’s website, videos on how to use the tool, information/lessons on how I have used it or how others are using it, and how to access more information for each tool.

2. **Impact**

Due to my experiences in the Instructional Technology program, I have been made aware of a variety of website builders. I have also had experience creating my own websites for projects using other website builders, but never on Weebly. I taught myself how to use Weebly to create my own website. I was very familiar with using Wix to create websites, but not with Weebly. Therefore, this was a great way to teach myself. Secondly, the creation of this website has been very useful to teachers who are just learning about the technologies. It’s a place they can visit and find lots of information to help them. We can easily add to the website as we uncover new information and tools. Working on this website is not only giving me experience with a new technology, Weebly, but also with learning more about the other technologies. So as I set up a way for others to learn, I am learning, too. This experience fits well into the Instructional Design category because I was able to focus on the needs of the learners, which is the staff at my school. I used the ADDIE model to develop the web learning tool by analyzing what was to be learned, specifying how it would be learned (the design aspect), developing the learning tool utilizing a variety of materials, implementing the website, and as teachers begin to use it, I will evaluate its adequacy and make changes as needed.

3. **Intent**

As a result of creating this website, I intend to keep adding to it and using it as it was intended - a technology training site for new technologies. I also intend to extend the site to staff at the other schools in my district so that perhaps, it can be shared with everyone in the district. The goal is to have it as a learning platform to help and share with each other. I have wanted to create this website for many years now and I am thrilled that I’ve been able to complete it and share it with others. I have a very good feeling that it will be useful to the entire teaching staff.
